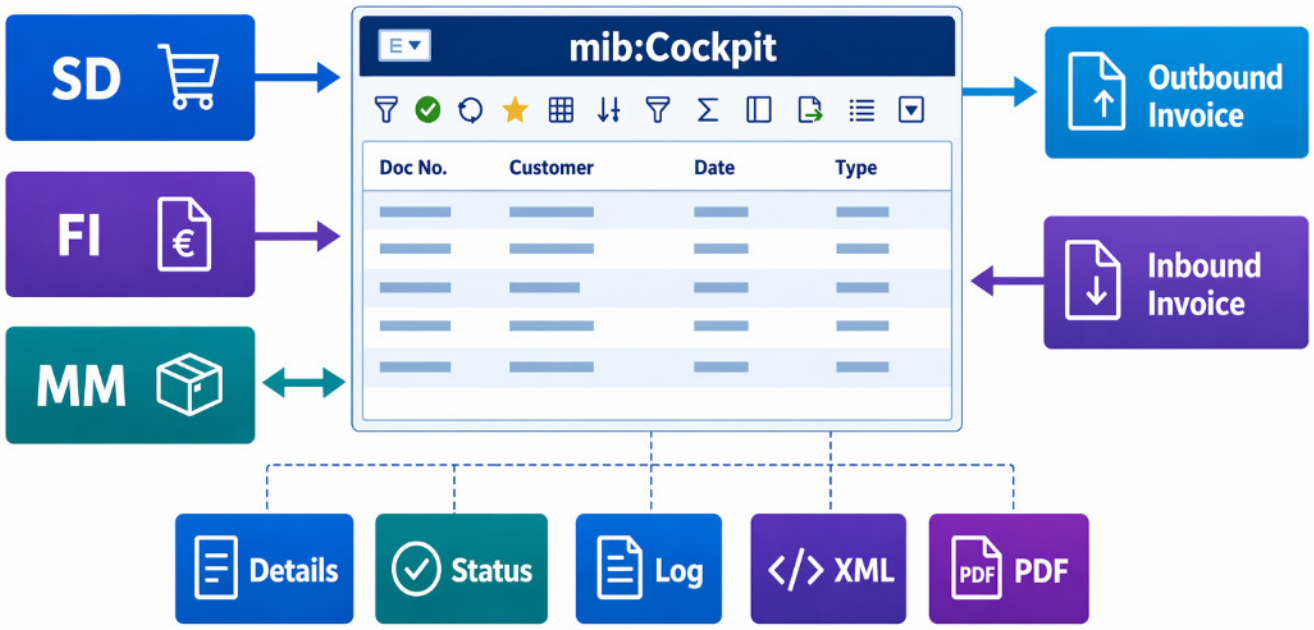
e-Invoicing made simple and secure

A certified, platform-independent solution for electronic invoice exchange via Peppol from 1 January 2027



mib:Peppol is a certified integration solution for automated, two-way exchange of e-invoices (XML BIS 3.0) directly from SAP and non-SAP systems, with no external applications required.

It guarantees companies legal compliance and meets the technical and operational requirements of the Slovak Peppol Authority (PASR) from 1 January 2027.

- **Certified Access Point** for a secure connection to the global Peppol network
- **Two-way exchange** of invoices, credit notes, debit notes and self-billing documents in BIS Billing 3.0 and BIS Self-Billing 3.0
- **Direct integration** of SAP systems and fast connection of non-SAP platforms via REST API
- **Automated transmission** (sending/receiving) of invoices with tax reporting (Tax Data Document) to the Slovak Financial Administration

Key benefits for your business

- **Security** of network communication with a certified TLS A+ rating
- **Compatibility** with SAP S/4HANA and ECC, including systems without active maintenance
- **Product independence** with no need to buy other licences (e.g. SAP BTP, Ariba or Concur)
- **Integration** of non-SAP systems via REST API
- **Extensibility** with approval workflows and robotic process automation (SAP BTP / RPA)
- **Flexibility of our own product** open to future extensions and tailoring to customer requirements

Getting ready for e-invoicing in 2027? We have the solution.

We will gladly walk you through how mib:Peppol can work in your company and answer your questions. More about our solution, including practical video demos, is on our product website.

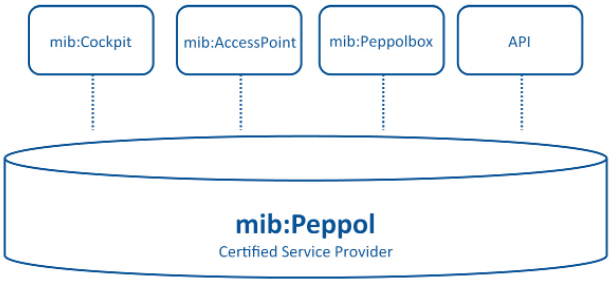
How mib:Peppol modules work

Users work in **mib:Cockpit**, which handles creating, sending, receiving and archiving electronic invoices in SAP.

mib:AccessPoint securely transmits invoices to the recipient's Access Point, receives invoices from the sender's Access Point, submits Tax Data Documents (TDD) to the Slovak Financial Administration and exchanges status messages (MLS) in both directions.

mib:Peppolbox monitors transmissions, visualises events occurring in the Access Point and provides transport logs.

SAP and non-SAP systems connect through the **API**, data is transformed to XML, validated, and the invoice is sent to the Access Point.



How mib:Peppol implementation runs

Prepare — **Explore** — **Realize** — **Deploy** — **Hypercare**

Phase	Main activities
1. Prepare	Verification of technical prerequisites, connectivity, access, the project team and the integration route
2. Explore	Quick Start – basic installation and customizing, analysis of sales, finance or logistics processes, data, master data, attachments, archive and error states
3. Realize	Installation and configuration of components, SAP → Peppol XML mapping, integration, monitoring setup and testing
4. Deploy	UAT, production setup, user training and preparation for production start (Go-Live Readiness)
5. Hypercare	Increased monitoring of transmissions, incident resolution, stabilisation and handover to standard support

Project duration depends mainly on the availability of system access and test data, the readiness of master data, the number of companies and scenarios, existing modifications, the integration route, the archive and the scope of customer extensions.

Solution compatibility

	ERP ECC without maintenance*	ERP ECC with maintenance*	S/4HANA on-premise	S/4HANA Private Cloud	S/4HANA Public Cloud	non SAP*
mib:Peppol	✓	✓	✓	✓	✗	✓

* Compatibility requires an individual assessment. The customer provides input data and, if needed, access to the existing system.

MIBFORMA a.s., headquartered in Bratislava with a branch in Komárno, specialises in implementing **SAP** solutions across industries. As a member of **MIBCON Group** and a certified SAP partner, we sell licences, deliver implementation projects and provide long-term support to customers in full compliance with Slovak legislation. Together with the international SAP partner alliance **UNITED VARS**, we also provide services at local and global level.
